

My Study Plan

Introduction

I am Lydia Mavuso, a dedicated and passionate individual with an Associate Degree in Public Relations from Limkokwing University of Creative Technology. My interest in global agricultural development and sustainable food production has inspired me to pursue a **Bachelor's Degree in Tropical Agriculture and International Cooperation** at National Pingtung University of Science and Technology (NPUST).

Reasons for Choosing this Program

Agriculture plays a vital role in economic growth, food security, and environmental sustainability, especially in developing regions. Coming from Eswatini, where agriculture is a key sector, I am eager to gain knowledge in tropical agriculture, sustainable farming practices, and international cooperation. NPUST is renowned for its excellence in agricultural education and research, and I believe its global perspective will provide me with the skills needed to contribute meaningfully to agricultural development.

Study Goals and Learning Objectives

During my studies, I aim to:

- Develop a strong foundation in **agronomy, soil science, and sustainable farming techniques**.
- Gain practical knowledge in **agricultural economics and rural development** to support small-scale farmers.
- Understand **climate-smart agriculture and modern technological approaches** to increase productivity.
- Learn about **international agricultural policies and trade** to contribute to global food security.

Future Plans

After completing my degree, I plan to apply my knowledge in both local and international agricultural initiatives. My goal is to work with agricultural organizations, research institutions, or government agencies to improve farming methods, enhance food production, and promote sustainable agriculture in Eswatini and beyond. Additionally, I hope to encourage youth participation in agriculture by integrating modern technologies and innovative farming techniques.

Conclusion

By studying at NPUST, I believe I will receive the best academic training and hands-on experience in tropical agriculture. This program aligns with my aspirations to contribute to agricultural sustainability and economic development. I am eager to engage in research, practical training, and cross-cultural collaboration to prepare for a successful career in this field.
